What is a straw man proposal

Management consultants McKinsey has been developed several problem-solving proposals and strategies that are in line with your business problems. Straw man proposal for project managers is one among them. Straw man proposal is a method of problem-solving often applied to solve customer-centric issues with a more organized approach. It is a brainstorm-like approach addressing the deficiencies of business enterprises and companies. The "straw man" is an imperative tool for collaborative problem-solving in all phases and at every level of client engagement. A straw man proposal is a conceptual framework focusing; discuss, break down, and improve the methodology of customer-related problems. This is a hypothetical draft, which will make it easier to introduce better solutions and proposals on the basis of assumed knowledge. The use of a straw man is associated with a couple of hallmarks of McKinsey problem-solving. The straw man is hypothesis-driven and it allows a continuous process for getting to increasingly better solutions. Like anything else hypothesis-driven, the team should be prepared to abandon it if essential and recommence work with a new straw man. Concept Why did they use the term straw man is unclear. A straw man functions to scare potential threats to the materials, it is a symbol of protection and easy problem-solving. On the other hand, a straw man is easy to move, destroy, and rebuild. When you have framed a hypothetical draft, it also easy to amend and recreate if it was doesn't address the actual problems and solutions. It concerns a proposal for potential progress, with room for additional modernizations and/or adjustments. However, you should never expect a strawman proposal would bring the final solution to your problems. Instead, it should be considered valuable support when trying to come up with the best possible answer. Opinions and ideas that arise from the Straw Man Proposal do provide valuable feedback in a solution-oriented process, however, and lead to positive adjustments and developments. It is often the counter-arguments that direct to the ultimate solution. By working with the Straw Man Proposal, you can create provisional solutions. From there, people can start to think more innovatively and enter into deliberations. In partnership business with participatory action programs, the straw man proposal can be a beneficial tool for problem-solving. Both internal and external problems can be tracked and discussed when you have a defensive mechanism that enables open discussions. The fit example of where a Straw Man Proposal can be applied is when coming up with an early hypothesis based on a potential principal answer to a problem. One important condition here is that every team member must be ready to make an input and be willing to analytically assess other's contributions and discard them if required. It is about arguing and disproving the reasoning of an informal logical misconception. This creates a natural mindset for all engaged and allows one to inspect and take a quick look at all sides of a problem. Common examples of where a straw man proposal might be used Initial hypothesis for the overarching response for a customer engagement Partnership firms, those are engaged in the participatory discussion to solve internal problems Those firms who are like to involve their staff in developmental discussions. All firms that have participatory action plans Operational method Problem-solving is a multi-faceted approach that needs alternative choices. Though, one can apply the straw man proposal to different problems. For example, it can be used to stop revenue drops, identify unknown threats, find out potential causes, and make resolution platforms by brainstorming sessions. You can follow the following steps when you have decided to apply the straw man proposal. If you have a suggestion or a concept that addresses the present problems of your business, you can propose this framework before the bench of discussion. This hypothetical draft is a straw man proposal that will shape the basis of the management consultant. The hypothetical framework is then discussed with the management team. . Team members who are in support provide detailed arguments and list all the benefits. The challengers, on the other hand, give their doubts or objections and mention the possible drawbacks or disadvantages. By considering the Straw Man Proposal, as just a concept, all team members are free to answer and give their frank opinion. At this phase, their input has no direct influence yet. All team members are given the chance to provide open feedback and plans. One significant condition here is that the team must be conscious that the proposal is merely a Straw Man Proposal. All denunciation and ideas for progress are welcome. After all, these are just discussions thereby extract the pros and cons of the proposal. All the contributions including both pros and cons are collected, and the proposal will be subjected to SWOT analysis. Afterwards, the suppositions and decision-making criteria are explained, on the basis of which a new and advanced suggestion can be made. On the basis of discussion, a synthesis of the proposal can be presented, which will lead to the final decision. Final word The opinions and ideas that arise from the straw man provide valuable feedback that updates and improve the final answer. Sometimes, the most effective straw man is the one that gets discarded but adds incredible value by revealing where the answer is NOT. Often, the best arguments against a straw man end up being or leading to the real solution. Not to be confused with a straw man argument. A straw-man (or straw-dog) proposal is a brainstormed simple draft proposal intended to generate discussion of its disadvantages and to provoke the generation of new and better proposals.[1] The term is considered American business jargon,[2] but it is also encountered in engineering office culture. Often, a straw man document will be prepared by one or two people prior to kicking off a larger project. In this way, the team can jump start their discussions with a document that is likely to contain many, but not all, of the key aspects to be discussed. As the document is revised, it may be given other edition names such as the more solid-sounding "stone-man", "iron-man", and so on. Origins The expression was already in use in the United States Department of Defense circa 1975 in their Large Organization Model Building paradigm (LOMB) and was apparently in use with this meaning (initial proposal) in the United States Air Force before that.[3] The succession of names comes from the requirements document for the programming language Ada. In the High Order Language Working Group (HOLWG) the process to define Ada generated requirements documents sporting different names, representing the various stages of development of the Ada language.[4] as described in 1993 by Col William Whitaker in an article ACM SIGPLAN Notices.[5] They are: STRAWMAN issued in April 1975[6] WOODENMAN issued in August 1975[7] TINMAN issued in January 1976[8] IRONMAN issued in January 1977[9] (revised in July 1977) SANDMAN not published but circulated in January 1978 STEELMAN issued in June 1978[10] PEBBLEMAN Revised and issued in January 1979 STONEMAN issued in February 1980[11] Other references include "The Ada Environment", LTC Rodney A. Edge, Walter Reed Army Institute of Research, Washington, DC 20307, Thomas A. Marciniak, M.D., National Cancer Institute, Bethesda, MD 20205 [12] Software development In software development, a crude plan or document may serve as the strawman or starting point in the evolution of a project. The strawman is not expected to be the last word; it is refined until a final model or document is obtained that resolves all issues concerning the scope and nature of the project. In this context, a strawman can take the form of an outline,[13] a set of charts, a presentation, or a paper. The 'Straw Man' also fits in neatly with the concept of iterative design, repeating and re-drafting to improve an initial concept or design. If anything is built, often, it may not end up in the final product. It might be that the decision is to not continue at all, in which case, the 'Straw Man' approach may have saved a lot of wasted work in the long run. Or, the final approach may be very different from the first model. Either way, the 'Straw Man' will have proven its worth by having re-directed the approach before any significant work is undertaken [14] See also Stalking horse Straw man Aunt Sally References ^ Cross, Geoffrey A.
